

Exercise 5: Pipeline Job - Deploy a Flask Application with Gunicorn

1. Objective: Automate the deployment of a Flask application with Gunicorn on Windows.

2. Steps:

- o Create a Pipeline Job.

- o Write a Jenkinsfile to:

- Clone a Flask application from GitHub.
- Set up a Python virtual environment.
- Install required packages using `pip install -r requirements.txt`.
- Configure and start the Gunicorn server:

```
gunicorn -b 127.0.0.1:8000 app:app
```

- Verify the deployment using a curl command in the pipeline.

- o Add stages for:

- Unit tests using pytest.
- Post-deployment endpoint checks.

3. Task: Trigger the pipeline and ensure the Flask app is accessible on localhost

```
Started by user admin
[Pipeline] Start of Pipeline
[Pipeline] node
Running on Jenkins in C:\ProgramData\Jenkins\jenkins\workspace\flask-pipeline
[Pipeline] {
[Pipeline] withEnv
[Pipeline] {
[Pipeline] stage
[Pipeline] { (Setup and Run Flask Application)
[Pipeline] script
[Pipeline] {
[Pipeline] echo
